2. The testing methodology shall consider the potential conversion of THC-A in industrial hemp into THC and the test result shall measure the total available THC derived from the sum of the THC and THC-A content. Appropriately, the THC-A result will be modified by the molecular weight conversion factor 0.877 prior to summation with THC. The total THC concentration level shall be reported on a dry weight basis.

3. Analytical testing for purposes of detecting the concentration levels of THC shall meet the following standards:

a. laboratory quality assurance must ensure the validity and reliability of test results;

b. analytical method selection, validation, and verification must ensure that the testing method used is appropriate (fit for purpose), and that the laboratory can successfully perform the testing;

c. the demonstration of testing validity must ensure consistent, accurate analytical performance;

d. method performance specifications must ensure analytical tests are sufficiently sensitive for the purposes of detectability requirements of this Part;
